MXI Security's New ACCESS Enterprise 3.0 Device Lifecycle Management Software Joins the RSA® Secured® Partner Program

ACCESS Enterprise 3.0 provides centralized, one-click provisioning of RSA SecurID® software tokens for MXI Security's MXP line of portable security devices

Montreal, Canada, and Santa Ana, California, October 06, 2008 – MXI Security™, the leader in superior managed portable security solutions, today announced that RSA, The Security Division of EMC (NYSE: EMC) has certified interoperability between MXI's new ACCESS Enterprise™ 3.0 device lifecycle management software solution and RSA SecurID® technology. Using ACCESS Enterprise 3.0 from MXI Security, organizations can now manage strong authentication on their corporate networks by storing RSA SecurID software token technology within the MXP family of USB-based portable security devices. Biometrics, passwords, and RSA SecurID one-time passwords can be combined to provide three-factor authentication that is portable, convenient, and easy to deploy.

"We are pleased to be working with MXI Security to certify interoperability between RSA SecurID technology and ACCESS Enterprise 3.0, which will help our joint customers assure identities before they access sensitive corporate resources," said D.J. Long, Senior Director, Corporate Development at RSA. "Our organizations are committed to helping mitigate risk to sensitive information throughout its lifecycle, ensuring such information is always an asset and not a liability."

"A previous version of MXI Security's device lifecycle management software had been interoperable with RSA SecurID two-factor authentication technology for more than a year and we are pleased that the latest version of ACCESS Enterprise has been newly certified," said Lawrence Reusing, CEO of MXI Security. "ACCESS Enterprise 3.0 meets the needs of our government and corporate customers looking for an easier and faster way to seamlessly deploy thousands of portable security devices across their organizations."

No other software security company has the capability for one-click identity provisioning offered by MXI Security's ACCESS Enterprise 3.0. It allows organizations the ability to rapidly issue portable security devices with one-click identity provisioning of identity credentials, such as RSA SecurID software tokens and digital certificates, with versatile three-factor authentication options, including biometrics.

ACCESS Enterprise 3.0 includes a Portable Content Manager that allows IT administrators to simply drag and drop corporate applications to pre-load portable security devices with a single sign-on for web forms, a portable secured Internet browser, remote access clients, and even virtual desktops. There is no installation of software required on users PCs.

ACCESS Enterprise 3.0 also offers a comprehensive set of recovery and help-desk functions. Organizations have the option to destroy secured data when suspect behaviors occur, such as unsuccessfully authenticating to the device a number of times, or to set the devices for help desk data recovery and user rescue.

About the RSA Secured Partner Program:

The RSA Secured Partner Program is one of the largest alliance programs of its type, bringing over a dozen years of experience and hundreds of complementary solutions together. RSA SecurID, RSA® Access Manager, RSA® Certificate Manager and RSA® Federated Identity Manager certification programs bring added assurance to customers that the solutions they are deploying are certified as interoperable with industry leading products, helping them achieve faster time to deployment and lower overall cost of ownership. The RSA Secured Partner Program reflects RSA's commitment to providing standards-based interoperability and mutual vendor support to customers using its identity assurance and access management solutions.
