

MXI SECURITY®

ACCESS Antivirus Scanner™

On-board Virus & Malware Protection

Available For all MXI Security Secure Portable Storage Devices

MXI Security devices now offer an on-board virus and malware scanner that employs McAfee® technology to protect against viruses, worms, trojans, and other malware threats.

Most organizations today already actively protect their network from becoming infected by using desktop anti-malware or anti-virus software. However, with access to portable data now an everyday necessity, this form of protection is not enough.

MXI Security's ACCESS Antivirus Scanner™ prevents malware from being copied onto USB drives, allowing users to retain the convenience of portable storage while protecting the devices, their data, and the systems they encounter from malware. Resident on the device and requiring no installation, this security measure is available on each and every computer a users visits.

Around a tenth of all malware is designed to use portable storage media, such as removable USB drives, as an attack and spread vector.

Vnunet.com, April 2nd 2008, Robert Jaques, USB malware on the rise.

Host Health Check - Be aware if you are plugging into an infected host.

When an MXI Security device with the on-board Malware Scanner is plugged into a host computer, it automatically scans vital areas, ensuring the host is generally secure. If not, a warning appears so that the user can take immediate action and remove device.

Active Scanning - Get protection that's always on.

The on-board Malware Scanner constantly monitors file transfers to the device, automatically detecting and eliminating any malware that, under normal circumstances, could be copied to the device and potentially transferred to other systems.

Malware Growth by Year
