

FOR IMMEDIATE RELEASE

Ultimate USB Security at your fingertips with the next generation Stealth MXP Bio encrypted USB drive

MXI Security's new Stealth MXP Bio offers fingerprint recognition and strong multi-factor authentication in hardware, providing unmatched security for portable storage and digital identities.

January 12th, 2010 (Montreal, Canada and Santa Ana, California) – MXI Security, the leader in managed portable security solutions, today announced the next generation of its Stealth MXP[®] Bio encrypted USB drive. Once again providing the strongest user authentication technology in the industry, the new product builds upon the worldwide success of its award-winning predecessor.

With both biometric and strong password technology, the Stealth MXP Bio offers 1-, 2-, or 3-factor authentication for the highest security levels. All authentication processes, including biometrics, are performed completely within the trusted hardware, fully isolated from malicious attacks on the host computer.

The Stealth MXP Bio is the most comprehensive USB security device on the market. Going beyond simple secure storage, it offers digital identity and PKI token services ranging from RSA SecurID[®] and OATH OTP to on-board key generation, digital signatures, and secure key & certificate containers.

“The Stealth MXP Bio offers the strongest user authentication available, and is immune to PC-based password attacks. Coupled with its OTP and PKI features, this makes it ideal not just for secure portable storage, but for authentication into the cloud. It's a do-everything device.” said Lawrence Reusing, CEO of MXI Security.

Incorporating the latest version of MXI Security's Bluefly processor (www.blueflyprocessor.com), the Stealth MXP Bio offers AES-256 CBC hardware encryption of all on-board data, and an in-hardware malware-proof mode to protect against attack. It also joins other Stealth products in being the first and only USB drives to meet the NIST SP800-56A Key Agreement Scheme, offering unparalleled protection for host-to-device communications.

About MXI Security

MXI Security, a division of Memory Experts International Inc., leads the way in providing superior managed USB portable security solutions designed to meet the highest security and privacy standards of even the most demanding customers.

MXI Security solutions combine the power of strong user authentication, digital identity and data encryption to protect access to sensitive information and systems. Easy to manage and transparent to the end user, MXI Security solutions enable organizations to satisfy multiple security needs with a single device, facilitating greater mobility without compromising security.
