

One-click RSA SecurIDfi provisioning for securing Portable Remote Access

Business Challenge

Extending the corporate network borders outside of the organization for greater business mobility puts corporate resources at risk. Protecting access to critical data and applications is the challenge that RSA SecurIDfi authentication responds to with a unique, time-synchronous solution that automatically changes the user's password every 60 seconds. MXI Security Managed Security Devices such as the Stealth MXP perfectly complement RSA SecurIDfi software tokens by providing a portable security platform with the strongest authentication mechanism and hardware encryption algorithm.

This combination allows seamless access to resources, ensuring greater security while addressing the challenge of preserving the mobile user's productivity. For administrators, MXI Security also provides ACCESS Enterprise, a device lifecycle management solution that allows them to manage issuance, renewal, and revocation of RSA SecurIDfi software tokens for their users and devices.

Key Features and Benefits

All-in-one driverless portable security device with zero footprint

- Stealth MXP™ provides up to 16GB in portable USB flash
- Hardware-based data protection with transparent AES 256-bit CBC mode encryption
- 2-or-3 factor strong authentication (biometric, password or both in combination with hardware) to release access to RSA SecurIDfi software tokens
- Full portability of RSA SecurIDfi software tokens

Manageability

- Streamline RSA SecurIDfi software tokens issuance by eliminating manual operations for user edition, token selection, configuration and file import
- Allow RSA SecurIDfi software tokens to be placed on the device during device issuance
- Leverage existing servers and identity store
- Allow post-issuance provisioning for new credential issuance or renewal

Use Case Scenarios

Securely collaborate from anywhere

- Store your RSA SecurIDfi software tokens on a Stealth MXP and securely collaborate with your business partners from any location in the world

Secure remote access for mobile workers

- Connect to your corporate network remotely when you're on the road or working from home - without worrying about losing your portable security device
- Simply select the RSA SecurIDfi option from the MXI Security Menu Tray to securely access your data and resources

Protect access to sensitive information

- Impose strong biometric authentication before granting access to medical records and critical business applications

Facilitate large deployments

- Seamlessly deploy many devices with preset user profiles and generate RSA SecurIDfi software tokens in a simple click
