

MXI Security and Envoy Data Team to Deliver Trustworthy Encrypted USB Portable Security Solutions

Montreal, Canada, and Santa Ana, California, July 21st, 2009 – MXI Security®, the leader in providing superior managed portable security solutions, today announced the appointment of Envoy Data Corporation as a key US distributor.

Envoy Data provides a proactive approach to their customer's needs, by not only providing distribution services to customers, but also through premier customer service, implementation services, and level 1 support. This partnership will accelerate widespread adoption of MXI Security's portable solutions for secure storage and identity access management services within the healthcare, financial, government, education, commercial, and industrial industries, providing a single answer to the pressing issues of portable data security, secure remote access, and compliance.

"MXI Security's solutions are a great addition to the Envoy Data product offering in particular the new M-Series with the fast and efficient Bluefly Processor that provides on-board transparent hardware AES 256-bit CBC encryption and protects against all forms of malware. We are now able to provide customers with a complete Managed Portable Security Solution that also compliments many of our other IT solutions." said Jeff Ciraulo, Vice President of Marketing, Envoy Data.

Increased mobilization of the workforce has brought new challenges: protecting data taken outside the corporate environment and providing transparent secure external access to data.

MXI Security's superior AES 256-Bit Encrypted USB devices for securing data and storing digital certificates and RSA tokens is a way for organizations to leverage the power of being able to carry portable data, increasing productivity. In addition, managing large deployments of devices is simple with ACCESS Enterprise that provides full manageability, remote user rescue, device recovery, device recycling and re-issuance even for biometric based devices.

"MXI Security is pleased to have partnered with Envoy Data Corp, together we will be able to reach out to even more customers and provide them with added value solutions and services." says North American-based MXI Security President Julian Reusing.

McAfee is selling MXI Security manufactured products in the Government sector as well as opening doors to other industries. The partnership with Envoy Data is another step toward making encrypted USBs a mainstream device that companies in a variety of industry sectors turn to protect and secure data, systems and networks.

About Envoy Data
