

## **MXI Security and Hypertec Team to Deliver Trustworthy USB Portable Security Solutions**

*Partnership unlocks Government's access to greater mobility without compromising security*

**London, UK – April 28, 2009** – MXI Security™, the leader in providing superior managed portable security solutions, and Hypertec, a supplier of Bespoke IT Enhancement Solutions, Memory, Storage and Accessory Products within the United Kingdom via specialty resellers, today announced that they will join forces to deliver industry leading portable security to meet the high standards the public sector can trust to protect confidential data and secure networks.

According to figures from the Information Commissioner's Office, the Public Sector has been responsible for 192 out of 376 data breaches reported in the last 15 months. It urges organisations to make data protection part of their corporate governance, and if they fail to take data protection seriously, the Public Sector risks losing the trust and confidence of the public.

“We see a strong demand for FIPS Validated USB portable security solutions throughout the channel including the Public Sector, and we have chosen to offer the best available products to our customers,” explained Lianne Denness, Managing Director at Hypertec. “MXI Security has a strong reputation and an impressive track record of serving more than 150 Government Organisations worldwide.”

Hypertec will launch its own branded products, FipsEnCrypt Mini, based on MXI Security's FIPS 140-2 level 2 Validated Stealth Mini™, devices to government customers through its highly performing network of corporate resellers across the UK. UK-based Hypertec has been a recognised IT distribution business for over 19 years and has experienced significant growth in selling secure solutions to the Public Sector.

Hypertec will also be making available a range of products utilising MXI Security's technology to the public sector, and to the MOD via the usual authorised purchasing channels, including the CESG CAPS validated product, once the validation is obtained.

“The Public Sector needs portable security solutions that they can count on to restore citizens' trust that their personal information is secure and protected. MXI Security is committed to delivering the technology that will ensure 100 percent portability to secure data and preserve this trusted relationship,” says London-based MXI Security President Gerard Reusing. “. We are confident that our partnership with Hypertec will only increase the confidence Public Sector Organisations have come to expect from MXI Security's products.”

MXI Security is a pioneer in portable security, and was the first company to certify its products through the rigorous FIPS 140-2 level 2 validation process. Well established in the United Kingdom with customers including the City of London Police, MXI Security serves the most security demanding Public and Private Organisations in the world.
